Software Engineering and Game Development Student

C# | Python | JavaScript | TypeScript | Java | Unity

Highlight of Skills

- Software development student with hands-on experience building full-stack applications using JavaScript, React, Node.js, Express, and databases such as MongoDB, Oracle SQL, PostgreSQL, and Microsoft SQL Server
- Strong foundation in object-oriented programming with C#, Java and Python, along with experience developing REST APIs, working with databases, debugging, and using Git/GitHub
- Currently expanding software engineering skills through game development projects, which provide additional experience in programming, system design, and problem-solving
- Quick to learn new technologies and interested in applying these skills to real-world software development projects
- Highly skilled results-oriented problem-solver with strong analytical skills used for debugging and troubleshooting
- Skilled in HTML, CSS, Bootstrap, Tailwind, React, Node.js, Express, APIs
- Familiar with tools such as VS Code, Visual Studio, MS Visio, Linux and Windows administration
- Knowledge of concepts such as object-oriented programming, data structures, algorithms, MVC and other design patterns, testing, network protocols
- Completed courses on freeCodeCamp.org YouTube Channel and Codecademy, and Network Technician Career Path at the online Cisco Networking Academy

Education

Centennial College, Toronto, ON

Game - Programming

September 2025 - Expected December 2028

GPA: 4.43 / 4.5

Coursework includes: Python, web development fundamentals, software engineering fundamentals, Object-Oriented programming in C#, front-end web development, databases (Oracle SQL), software requirements engineering, Java, full-stack web development using MERN stack, assets creation and game development in Unity

Seneca College, Toronto, ON
Computer Systems Technician

May - August 2025
GPA: 3.9 / 4.0

Labs include: Linux systems; Windows Server and client systems (VMs deployment and configuration, OS installation, networks creation and configuration, sharing, CLI/GUI administration); networking labs (subnetting, network addressing and intro to routing)

Projects

Tic Tac Toe game - HTML, JavaScript and TypeScript

Built a Tic Tac Toe game for two players with vanilla HTML / CSS / JS and refactored using an MVC pattern and TypeScript. The game state can be saved and reinstated across browser windows (players can play in the same or different browser windows) and on browser restart. Planning to refactor the app using React.

Full-Stack note-taking application – MERN Stack

Built a full-stack note-taking application using MongoDB Atlas, Express.js, React, and Node.js. Implemented secure user authentication, authorization for personalized note management, and a rate limiter using Redis Upstash. Built RESTful APIs to create, edit, delete, and retrieve notes from the database. Designed a responsive React interface for organizing and efficiently managing notes.

2D climbing platformer – Unity / C#

Working on a 2D climbing platformer implementing player movement, climbing and collision mechanics. Working to design multiple levels featuring obstacles, collectibles, and progressively challenging gameplay, including randomized choice for the player of additional platforms to progress in the game.
